

Patriot Long Range Sniper Targets

... "we begin where others end"

- **AR-500**
- **Patriot Rifle Grade**
- **Patriot Military Grade**

Finally, a steel target that is engineered and designed to be shot. Patriot targets are engineered and designed to be the best steel targets in the world. Utilizing over 30 years of metallurgical and steel design knowledge, Patriot has produced specialty steel targets that can be shot from the handgun level to .50 Cal Armor Piercing rounds. We even produce steel targets used by the US Military for the 30MM TP-T round.

Our targets have three rating levels and begin with AR-500 which is recognized through-hardened steel for handgun and light caliber rifle shooting. Most high quality target manufacturers utilize this material today, but generally it is all they can offer.

Our second level is the ***Patriot Rifle Grade***. This steel allows rifle fire up to and including the .50 BMG in Automatic Fire and the .50 Cal M8 API round in Sniper Fire. This steel has many uses besides targets, such as custom ballistic protection shielding for military infantry lifters or any type sensitive and expensive equipment.

Our ***Patriot Military Grade*** is at the pinnacle of steel targetry. Able to withstand .50 Cal MK211 Auto-Fire thru the 30MM MK239 rounds, this steel has many uses besides targets, such as lifetime ballistic protection shielding for military infantry lifters or any type sensitive and expensive equipment.

-  **Long-Range Sniper**
-  **Specialty Targets**
-  **Custom Ballistic Shielding**

Any Custom Configuration desired!
